A WILDLIFE DISCOVERY APP FOR BRISBANE WALKERS

Wild Neighbours

Who lives along your trail? **Walk in, find out, collect them all.**

Birds · Mammals · Reptiles · Frogs · Piloted on Mt Coot-tha

Team Hairy Penguins
DECO1800 · The University of Queensland · 2026

THE CONCEPT

A Pokédex for the bush on your doorstep

Wild Neighbours maps recent public wildlife records as **shaded habitat zones** on a trail map. Walk into a zone and every species recorded there joins your personal collection. Spot one yourself, or find its tracks, to **level up the entry**, earn XP and unlock badges.

WHO IT'S FOR

Casual hikers around Brisbane

Students, families and weekend walkers who use local trails but **don't know who they share them with**. No expertise, no account and no special gear needed: just a phone.

Weekend walkers · Uni students · Families · New to Brisbane

OUR AIMS

1. **Make local wildlife visible**
   Turn 30,000+ public records into something you can see on the trail.
2. **Reward getting outside**
   Every zone counts, so even a walk with no sightings still makes progress.
3. **Build curiosity and care**
   Fun facts, activity patterns and threatened-species flags show what's worth protecting.
4. **Keep animals safe**
   Zones, never pinpoints. Nothing you record leaves your phone.

How it works

Mobile-first web app · install to your home screen · works offline

1

Pick a spot

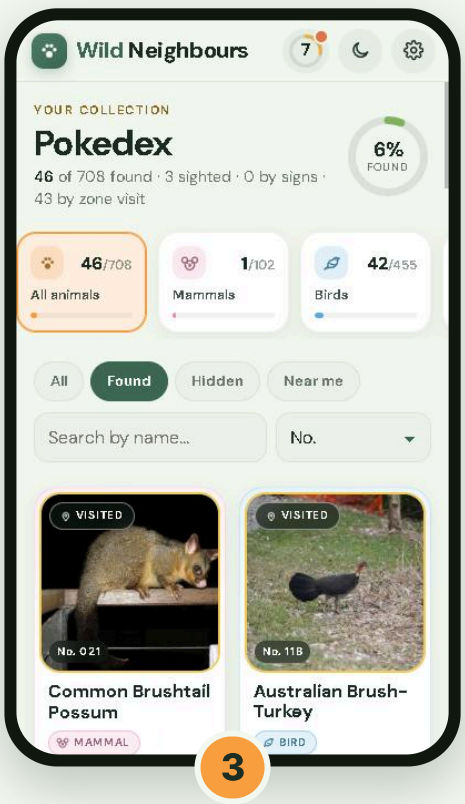

Pick a place and radius. Recent records show as habitat zones; visited ones turn gold.

2

Walk into a zone

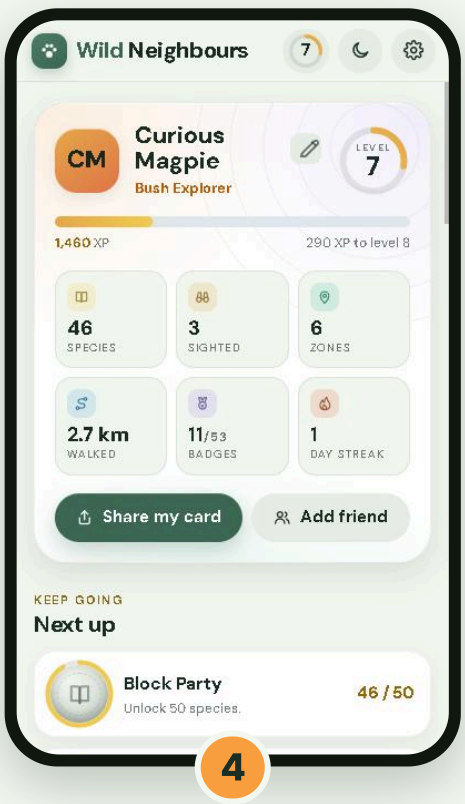

Every species recorded there joins your collection. Tap *I spotted it* or *Saw signs* to level it up.

3

Fill your Pokédex

708 numbered species cards with photos and fun facts. Locked ones wait to be found.

4

Level up

Earn XP, ranger ranks and 53 badges, then compare ranger cards with friends.

708	32,395	53	Zones only
species to discover	wildlife records mapped	badges to earn	never an animal's exact location

SAFE BY DESIGN

Records are grouped into 220–420 m zones, so no animal can be pinpointed. Sensitive species are left out. No accounts, no server: your sightings and photos stay on your device.

POWERED BY OPEN DATA

Queensland Government WildNet Data API and the Atlas of Living Australia (incl. iNaturalist Australia and BirdLife Birdata).
